# REBEL FOR PEACE AND PLANET

Extinction Rebellion Peace  
is rebelling outside the  
**Ministry of Defence from October 7**

Learn about the links between militarism and the climate and ecological emergency. Join us for workshops, teach-ins, exhibitions, active listening, story tellers, musicians and much more.

Militarism is at the heart of the industrial system that's driving climate change.

Many 21st Century conflicts are about controlling access to oil. About 6% of the global carbon footprint results from military-related activity. The US military alone is the largest single emitter of greenhouse gases in the world. Like the climate emergency nuclear weapons pose an existential threat– as their use could cause a nuclear winter and global famine.

Getting to net zero by 2025 will require radical change, including a shift away from war as a means of resolving conflicts. To avert climate catastrophe we have to transform the war machine that props up the fossil fuel industry. Join XR Peace outside the MoD to demand the government use the resources currently going to the military to address the threat of climate change.
